The Deploy360 Programme helps organizations accelerate the deployment of new Internet standards and technologies. We provide real-world information on topics such as IPv6 and DNSSEC, speed innovation and economic growth, and increased security. While the Internet Engineering Task Force creates protocols based on open standards, some are not as well-known or as quickly deployed as they could be. Deploy360 bridges this gap between completed standards and real-world deployment.

At www.internetsociety.org/deploy360, you’ll find technical how-to resources from industry experts, including articles, case studies, and other in-depth information in a free and open format.

How You Can Participate
The Deploy360 Programme helps the Internet community deploy new technologies in four key areas:

1. WEB PORTAL
   Search our online knowledge repository:
   • Technical Documents
   • Case Studies
   • Audience-Specific Information
   • Blog Posts
   • Multimedia Resources

2. SPEAKING ENGAGEMENTS
   Meet us or invite us to speak:
   • Industry Events
   • Regional Summits
   • Network Operators’ Groups
   • Technology Summits

3. SOCIAL MEDIA
   Find us under “Deploy360” on these channels:
   • Twitter
   • Facebook
   • Google+
   • YouTube

4. ION CONFERENCES
   Discuss, share, and learn about Internet technologies and trends:
   • Multiple Events Per Year
   • Global Locations
   • Expert Speakers
   • Diverse Audiences

How You Can Improve Deploy360
• Create new resources or curate existing content
• Define new features for our web portal
• Join us at an ION Conference or on our social media channels

About the Internet Society
The Internet Society is the trusted independent source for Internet information and thought leadership from around the world. With its principled vision and substantial technological foundation, the Internet Society promotes open dialogue on Internet policy, technology, and future development among users, companies, governments, and other organizations. Working with its members and Chapters around the world, the Internet Society enables the continued evolution and growth of the Internet for everyone.
Are you an expert in IPv6, DNSSEC, or Routing Resiliency/Security? Deploy360 needs your help to deploy the next generation of the Internet!

Deploy360 is an Internet Society programme that provides real-world guidance on implementing these new technologies efficiently, quickly, and painlessly. We’ve created content roadmaps at www.internetsociety.org/deploy360/roadmap outlining the information we need, including educational modules, case studies, and how-to documents.

How You Can Participate
To draft a roadmap document, you should be an expert in your field with real-world operational experience in your chosen topic(s). Your expertise will:

• Contribute to increased deployment of key Internet technologies.
• Ensure a robust, secure technical infrastructure that’s available to everyone.
• Bridge the gap between open Internet standards and final adoption of those standards by the global operations community.

How the Process Works
1. Identify the document(s) you’d like to produce.
2. Create an outline of the proposed document(s) and send it to us for review.
3. Write the document(s).
4. Get peer approval from the Deploy360 review committee.
5. See your work published on our site, and receive an author credit.

Email us at deploy360@isoc.org to get started.
