

**RIPE NCC**  
RIPE NETWORK COORDINATION CENTRE

# RIPE Atlas

Measuring the Internet

# Why

What is it useful for?

# Why RIPE Atlas? (1)

**Internet**

**Growth**

**Critical**

**Multi-  
Stakeholder**

**Measurements**

**Monitor**

**Troubleshoot**

**Improve**

**Security**

**Lack of Internet wide measurements**

# Why RIPE Atlas? (2)

## Goals:

- Internet wide measurement system
  - Internet infrastructure, not all applications
- Real time & historical info
- Outbound and inbound measurements
- Collaborative effort
- Open and free
- IPv4 and IPv6 capable

# What

# What is RIPE Atlas (5)

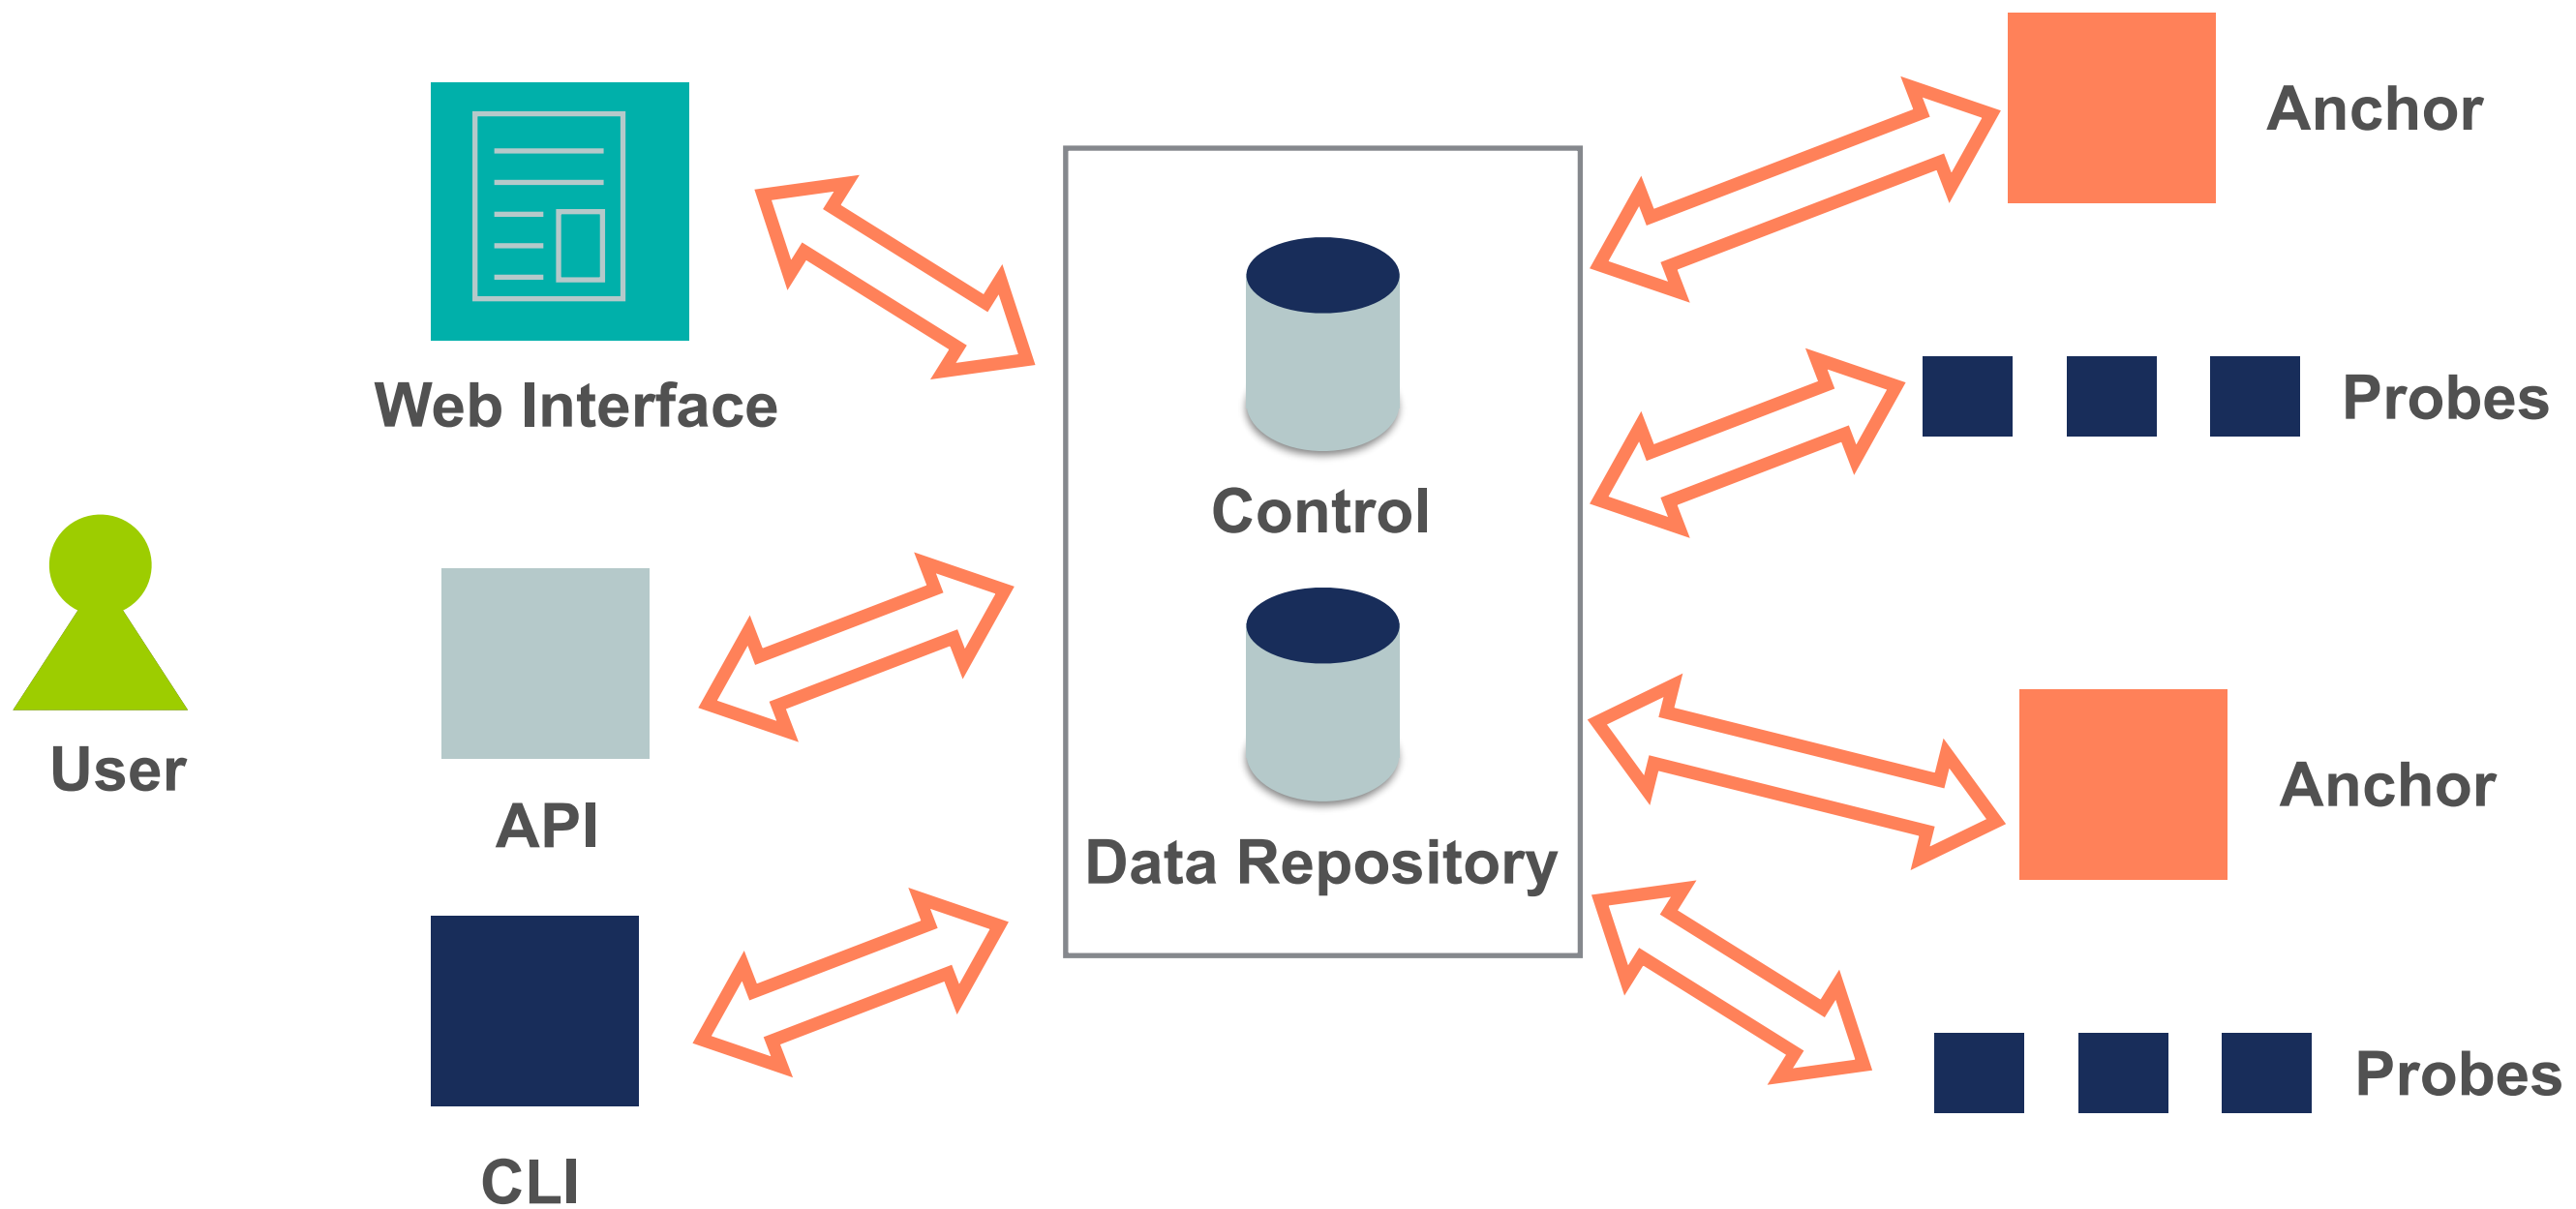

## Composed by: Measurements

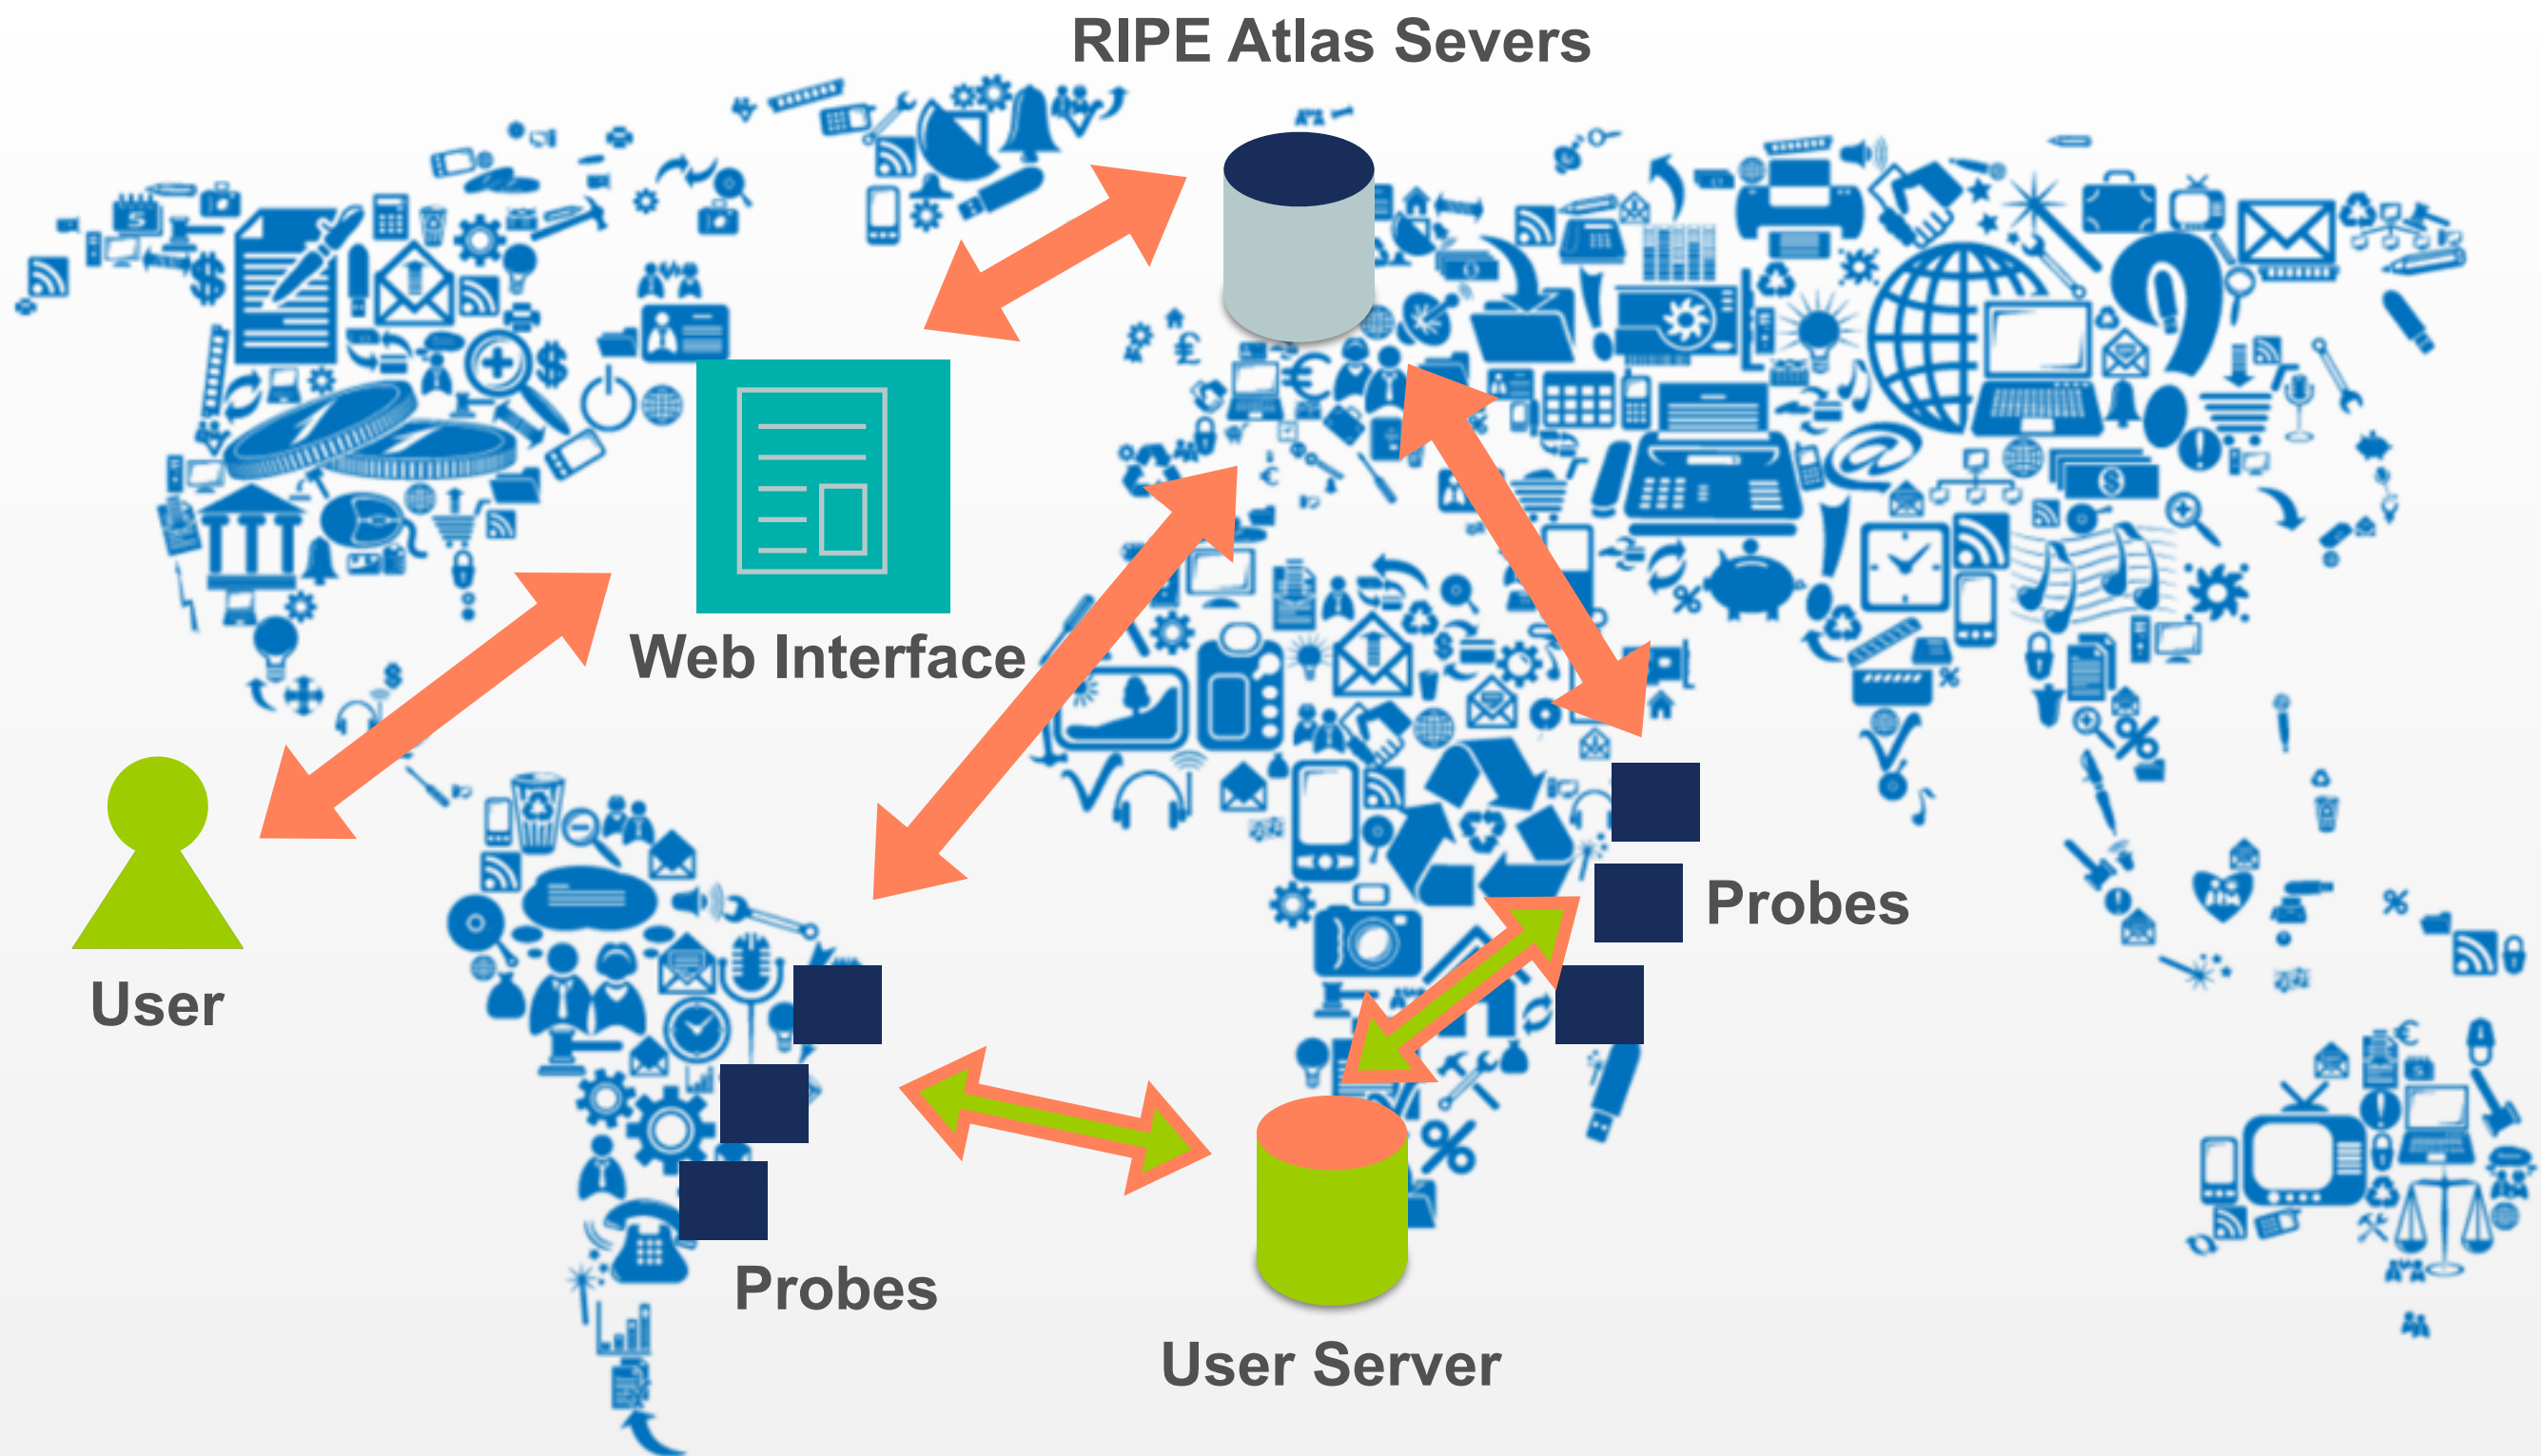

Measurements currently running

	Built-in	User-defined			
		Total UDM	Anchoring	DNSMON	Other
Ping	41	4363	505	0	3858
Traceroute	45	3303	507	817	1979
DNS	158	4869	0	3268	1601
SSL/TLS Certificate	4	225	0	0	225
NTP	0	44	0	0	44
HTTP	4	540	506	0	34

# RIPE Atlas Overview (1)

# RIPE Atlas Overview (2)

# How

How can you use it?

# How to use RIPE Atlas

- User friendly web interface, API or CLI
- System based on credits
- Create measurements (ping, trace route, etc.)
- Access (historical) data

# How to Access RIPE Atlas

- RIPE NCC Access account (<http://access.ripe.net>)
- RIPE Atlas -> My Atlas (<http://atlas.ripe.net>)

## My RIPE Atlas Dashboard

### Measurements 0 0 0

You do not have any measurements. Please visit the [measurements page](#) to start one.

### API Keys

You are not yet using API keys. If you'd like to start, you should visit the [API keys](#) page.

### Probes 0 0

You are not hosting or sponsoring any probes, which is the best way to earn credits for running measurements. Please visit the [host a probe](#) or [sponsor a probe](#) page to start earning credits.

### Anchors 0 0

### Credits 0 0

Daily Credits Balance

total daily income

total daily expenditure

# Credits

- Every measurement has a cost in credits
- Why? Fairness and avoid overload
- How to earn credits?
  1. Hosting a probe / anchor
  2. Being an RIPE NCC member (LIR)
  3. Being RIPE Atlas sponsor
  4. Transfer
  5. Voucher...

# RIPE Atlas measurements

- **Built-in** global measurements towards root nameservers
  - Visualised as Internet traffic maps
- **Built-in** regional measurements towards “anchors”
- **Users** can run customised measurements

# Highlights

- Six types of measurements: ping, traceroute, DNS, SSL/TLS, NTP and HTTP (to anchors)
- APIs and CLI tools to start measurements and get results
- Streaming data for real-time results
- Status checks (Icinga & Nagios)
- New: “Time Travel”, LatencyMON, DomainMON

# Security Aspects

- Probes:
  - Hardware trust material (regular server address, keys)
  - No open ports; initiate connection; NAT is okay
  - Don't listen to local traffic
  - No passive measurements
  - Automatic FW updates
- Measurements triggered by “command servers”
  - Inverse ssh tunnels
- Source code published

# Ethical Considerations

- No passive measurements (no user traffic)
- Set of measurements is limited
- HTTP measurements only to Anchors
- All data is open and available to anyone
- Barrier to entry is low/cheap
- Open API's
- Open source code on GitHub

# Troopers17 - NGI voucher

- You can start playing right now!
- **Login** using your RIPE access account
- Go to RIPE Atlas ([atlas.ripe.net](https://atlas.ripe.net))
  - My Atlas (left menu)
  - Credits
  - Redeem voucher

Ah! The voucher! :-)

# Creating Measurements (1)

## Create a New Measurement

### Step 1 Definitions

+ Ping

+ Traceroute

+ DNS

+ SSL

+ HTTP

+ NTP

### Step 2 Probe Selection

Worldwide

10

+ New Set - wizard

+ New Set - manual

+ IDs List

+ Reuse a set from a measurement

### Step 3 Timing

This is a One-off: ☐

Start time (UTC):

As soon as possible

Stop time (UTC):

Never

# Creating Measurements (2)

Step 1 Definitions

+ Ping

+ Traceroute

+ DNS

+ SSL

+ HTTP

+ NTP

▼ Ping measurement

Target:

An IP address or hostname

Address Family\*:

IPv4

Packets:

3

Size:

48

▼ Advanced Options

Packet interval:

Time between packets (ms)

Skip DNS check:

☐

Disables target DNS check on measurement creation

Description:

Ping measurement

Interval:

240

How often this should be done (seconds between samples). Note that this value is ignored for one-off measurements.

Resolve on Probe:

☐

Force the probe to do DNS resolution

Spread:

Spread of uniformly distributed random probe start time phase

▼ Traceroute measurement

Target\*:

An IP address or hostname

Address Family\*:

IPv4

Timeout (ms):

4000

Description:

Traceroute measurement

Protocol\*:

ICMP

Interval:

900

How often this should be done (seconds between samples). Note that this value is ignored for one-off measurements.

Resolve on Probe:

☐

Force the probe to do DNS resolution

▼ Advanced Options

Packets:

3

Size:

48

Size of the packet

First Hop:

1

Paris:

16

Number of different variations for paris traceroute. Set 0 for standard traceroute.

Destination Extension Header Size:

0

The size of the destination extension header to include in the IPv6 packet.

# Creating Measurements (3)

## Step 2 Probe Selection

Worldwide 10 x

+ New Set - wizard

+ New Set - manual

+ IDs List

+ Reuse a set from a measurement

## Create your selection

In this panel you can manually create a probe selection. If you need more help or you want to visualize where the probes are, please use the wizard selection.

Type (mandatory)

[Jason Read](#) — 06 Sep 2016

## Using RIPE Atlas to Debug Network Connectivity Problems

[Stéphane Bortzmeyer](#) — 10 May 2016

# RIPE Atlas IXP Country Jedi (1)

- Do paths between ASes stay in country?
- Any difference between IPv4 and IPv6?
- How many paths go via local IXP?
- Could adding peers improve reachability?
- Experimental tool
  - Feature requests welcome!
  - Depends on probe distribution in country

# RIPE Atlas IXP Country Jedi (2)

- Methodology
  - Trace route mesh between RIPE Atlas probes
  - Identifying ASNs in country using RIPEstat
  - Identifying IXP and IXP LANs in PeeringDB

Figure 1: Visual representation of IPv4 paths (left) and IPv6 paths (right) between selected RIPE Atlas probes in Sweden

 IXP IPs: YES, out-of-country IPs: NO  
 IXP IPs: NO, out-of-country IPs: NO  
 IXP IPs: YES, out-of-country IPs: YES  
 IXP IPs: NO, out-of-country IPs: YES

# Use Cases (2)

- DDoS Attack on Dyn DNS Servers (Oct. 2016)
  - 10s millions devices - Mirai botnet
  - Legitimate requests

# Use Cases (3)

- Monitor Game Service Connectivity (Sept. 2016)
- Requirements:
  - Check General Reachability, Latency, Historical data
  - Supported by an active and helpful community
  - Integrate with their existing logging system
- Track down an outage in one upstream
- Became sponsors

# Use Cases (4)

- Amsterdam Power Outage (March 2015)
- When and where the outage was happening

# Training

- Webinar
- Training Course
