Lifting barriers to Internet development in Africa

Lower prices for Internet access are important because they:
- are evidence of a more competitive market that is relatively free of bottlenecks;
- can generate a virtuous circle by attracting more users, which increases scale and can reduce costs.

Average price per GB of traffic in Sub-Saharan Africa for Internet access bundles

The 20 benchmark countries examined in this report were selected from a variety of countries across three regions of Africa: West Africa, East Africa, and Southern Africa.
