Trusted and Open Internet

A Policy Framework

The Internet: trust in an open environment...

- An 'open and trusted Internet' is a globally, distributed, interoperable network of networks that cultivates innovation and creates opportunities for all;
- Its foundation lies in user trust, technologies for trust, trusted networks and a trustworthy ecosystem.
- It offers inclusive governance, is built on sound policy principles and strives to put the interests of Internet users at the heart of decisions.

Collaborative Security – making full use of the principles of:

- fostering confidence and protecting opportunities;
- collective responsibility;
- fundamental properties and values;
- evolution and consensus;
- think globally, act locally

USER TRUST

TRUSTED
NETWORKS

TECHNOLOGIES
FOR TRUST

TRUSTWORTHY
ECOSYSTEM

What are the Policies that can instill user trust in the Internet?

- Human Rights
- Communications confidentiality
 - Privacy
 - Consumer protection
 - Control over data
- Transparency in Policy Making
 - Legal Certainty
 - Enforcement and remedies
 - Non-discrimination
- Watchdogs and whistleblowers

What can governments do to enhance technologies of trust?

- * empower users to adopt their own technical measures of protection for their Internet communications and data;
- * encourage the open development and open access to “easy-to-use” tools that enable users to communicate confidentially;
- * encourage online service providers to offer their customers end-to-end encryption solutions.

What are the policies that support
trusted networks?

Security

Connecting Networks and Sending
Traffic

Open Technical Standards

How can we build a trusted ecosystem?

Inclusiveness & Transparency

Shared Responsibility

Effective Decision-Making & Implementation

Collaboration, distributed and interoperable
governance
