## ISOC Japan Chapter Zooms In on IoT Security

by ISOC Japan Chapter

The Internet of Things (IoT) is the 'in-thing' that is talked at all Internet-related events, and there has been countless publications and articles written about its success and potential. Yet, its challenges cannot be ignored, and one of the biggest concerns is IoT security. The more 'things' we put on the Internet, the more vulnerable we become to hacking, and other security and privacy breaches.

Japan has readily embraced IoT and its rapid growth not only reflects Japan's obsession with robotics and other cutting-edge technologies but it is also a practical mechanism to cope with its aging society
