

Bangladesh is among the world's most dangerous places for journalists: threats, assaults, kidnapping and murder are among the everyday dangers' reporters face simply for doing their jobs. With law and order further deteriorating in Bangladesh, online journalists are now as much at risk as traditional journalists.

Given these challenges, in this age of online communications, Bangladeshi journalists and contributors need to pay particular attention to digital security.

During the COVID-19 many of these journalists started to work from home. Now instead of relying on institutional hardware and digital practices, most journalists were using personal hardware and software for the publishing news. These led to several issues including prone to cyber-attacks and disinformation due to lack of means of verification.

Understanding this problem, Internet Society Bangladesh Chapter hosted a two-hour long session for journalists working from home.

Project Objectives:

- Strengthen digital security of local journalists who are working from home during COVID-19
- Localize digital security curriculum in Bangla and English. Enable more safety environment for the working from home journalists.
- Increase digital safety of journalists, bloggers and other media professionals who are working from home

Brief Description of Activities

Under the project the major activities were completed:

- Conduct a pre-training assessment survey to find out key perceived digital safety risks faced by participants
- Develop Module / Curriculum and training Design of Digital Security for Journalists

Profile of Facilitator

- Dr. Ruhul Amin, Assistant Professor, Computer and Information Science Department, Fordham University, NY, USA
- Mohammad Abdul Awal, Data Center Operations Manager, BGD e-GOV CIRT, Bangladesh Computer Council & Vice President, Internet Society Bangladesh

Training Workshop Methods

The sessions of the training were designed keeping in mind the comfort of the participants so that they can maximized their attention to the lessons. The facilitator also designed lively deliveries of the topics. The methods of the deliveries were: Lecture, Question & Answer, Discussion, Brain storming, Power point presentation, Use of internet etc.
